

TABLE II: G_{vd} (dB) and DeID (%) results on pooled development and test subsets of LibriSpeech. The random selection (RS), average, PSD, GAN-based, and the proposed IDMap-MLP and IDMap-Diff methods are included. In the GAN-based, IDMap-MLP, and IDMap-Diff methods, the results obtained by employing both the uniform ($\mathcal{U}$) and standard normal ($\mathcal{N}$) distributions for vector sampling are presented.

	RS	Average	PSD	GAN		IDMap-MLP		IDMap-Diff	
				$\mathcal{N}$	$\mathcal{U}$	$\mathcal{N}$	$\mathcal{U}$	$\mathcal{N}$	$\mathcal{U}$
G_{vd}	-1.684	-3.056	0.387	-0.137	-0.144	0.412	0.406	0.521	0.513
DeID	98.43	98.23	99.24	98.93	98.75	99.49	99.31	99.76	99.96
